Geriatrics/Index to volume 39/January 1984 through December 1984

SUBJECT INDEX

A

Adverse drug reactions
in the elderly, and, 53 (December)
Alcohol
interactions with psychotropics, and, 28 (December)
Alzheimer's disease
organic dementia, and, 38 (March)
Anemias
hematologic complications, and, 77 (June)
nutritional causes, 67 (August)
Antiarrhythmic therapy
cardiovascular problems and renal failure, 69 (January)
Antibiotic resistance
Hemophilus influenzae, and, 51 (September)
giant cell, fever of unknown origin, and, 46 (February)
Atrial premature complexes
ECG interpretation, and, 43 (December)

B

Back pain
new techniques for treatment, 41 (August)
Benzodiazepines
uses in sleep disorders, 42 (September)
Bleeding
drug reactions, and, 45 (May)
GI, 59 (May)
Blood
hematologic complications of the elderly, 77 (June)
Bradyarrhythmias
ECG interpretation, and, 105 (November)
Bronchitis
antibiotic-resistant *H influenzae*, and, 57 (September)
Bundle-branch block
ECG interpretation, and, 105 (September)

C

Cancer
colorectal carcinoma, screening and early detection, 42 (January)
fever of unknown origin, and, 46 (February)
hematologic diseases, 77 (June)
skin, and keratoacanthoma, 91 (September)
special considerations in older patients, 74 (July)
Cardiovascular disease
congestive heart failure, 77 (November)
hyperlipidemia, and, 99 (July)
nuclear diagnostic techniques, 105 (February)
renal failure and, 69 (January)
Cholestasis
surgical alternatives, 113 (May)
Cholesterol
coronary artery disease, and, 113 (September)
hyperlipidemia, and, 99 (July)
Colitis
chronic ulcerative, and cancer, 42 (January)
Constipation
management, 81 (December)
Cornea
disease, treatment of, 56 (January)
Coronary artery disease
cholesterol, and, 113 (September)
renal dysfunction and, 69 (January)
Congestive heart failure
Dx and Rx in the elderly, 77 (November)

D

Dementia
organic, 38 (March)
Dermatology
expected complaints in the elderly, 67 (December)
malnutrition, and, 69 (February)
Diabetes mellitus
diet, and, 57 (July)
diagnosis and epidemiology, 37 (May)
insulin use, and, 71 (October)
oral hypoglycemics, and, 77 (September)
peripheral neuropathy, and, 115 (February)
Digitalis
special concerns in the elderly, 97 (June)
Disk disease
new treatments for, 41, (August)
Drug reactions
adverse effects in the elderly, 45 (May) and 53 (December)
interactions with psychotropics, 28 (December)
Dysphagia
GI problems, and, 59 (May)
Dyspnea
old age or disease?, 46 (November)

E

ECG
atrial premature complexes, and, 43 (December)
bradyarrhythmias, and, 105 (November)
bundle-branch block, and, 105 (September)
normal ECG, 55 (August)
ventricular premature complex, 109 (October)
Endocrine disorders
thyroid and parathyroid function in the elderly, 99 (May)
Ethics
physicians' responsibilities in terminal care, and, 86 (December)
Exercise
for the elderly, 93 (February)
Eye
corneal disease, treatment of, 56 (January)
myasthenia gravis, late-onset, treatment of, 91 (January)
ocular drugs in the elderly, 97 (April)
ophthalmic herpes zoster, 79 (July)

F

Falls
causes, treatment, and prevention, 67 (April)
Fever
unknown origin, diagnosis of, 46 (February)
Fractures
osteoporosis and, 40 (April)
hip fractures, prevention and treatment, 75 (August)
Fraudulent therapy
protecting elderly patients from, 125 (September)

G

Gastroenterology
cholestasis, surgical alternatives, 113 (May)
constipation, management, 81 (December)
GI problems in the elderly, 59 (May)
ischemic bowel disease, 63 (November)
Gout
hyperuricemia, and, 89 (November)

H

Hearing
aids, 55 (March)
Heart
digitalis, special concerns in the elderly, 97 (June)
aged heart, special signs to watch for, 38 (June)
endocarditis, infective, 121 (March)
normal ECG changes in geriatrics, 54 (August)
sudden cardiac death, 49 (April)
Herpes simplex
corneal disease and, 56 (January)
Herpes zoster
ophthalmic infections in older patients, 79 (July)
Hematology
complications in the elderly, 77 (June)
Hypertension

CARAFATE®
(sucralfate) 1 gm tablets

BRIEF SUMMARY

CONTRAINDICATIONS
There are no known contraindications to the use of sucralfate.

PRECAUTIONS
Duodenal ulcer is a chronic, recurrent disease. While short-term treatment with sucralfate can result in complete healing of the ulcer, a successful course of treatment with sucralfate should not be expected to alter the post-healing frequency or severity of duodenal ulceration.

Drug Interactions: Animal studies have shown that the simultaneous administration of CARAFATE with tetracycline, phenytoin, or cimetidine will result in a statistically significant reduction in the bioavailability of these agents. This interaction appears to be nonsystemic in origin, presumably resulting from these agents being bound by CARAFATE in the gastrointestinal tract. The bioavailability of these agents may be restored simply by separating the administration of these agents from that of CARAFATE by two hours. The clinical significance of these animal studies is yet to be defined.

Carcinogenesis, Mutagenesis, Impairment of Fertility: No evidence of drug-related tumorigenicity was found in chronic oral toxicity studies of 24 months' duration conducted in mice and rats at doses up to 1 gm/kg (12 times the human dose). A reproduction study in rats at doses up to 38 times the human dose did not reveal any indication of fertility impairment. Mutagenicity studies have not been conducted.

Pregnancy: Pregnancy Category B. Teratogenicity studies have been performed in mice, rats, and rabbits at doses up to 50 times the human dose and have revealed no evidence of harm to the fetus due to sucralfate. There are, however, no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

Nursing Mothers: It is not known whether this drug is excreted in human milk. Because many drugs are excreted in human milk, caution should be exercised when sucralfate is administered to a nursing woman.

Pediatric Use: Safety and effectiveness in children have not been established.

ADVERSE REACTIONS
Adverse reactions to sucralfate in clinical trials were minor and only rarely led to discontinuation of the drug. In studies involving over 2,500 patients, adverse effects were reported in 121 (4.7%). Constipation was the most frequent complaint (2.2%). Other adverse effects, reported in no more than one of every 350 patients, were diarrhea, nausea, gastric discomfort, indigestion, dry mouth, rash, pruritus, back pain, dizziness, sleepiness, and vertigo.

DOSAGE AND ADMINISTRATION
The recommended adult oral dosage for duodenal ulcer is 1 gm four times a day on an empty stomach.

Antacids may be prescribed as needed for relief of pain but should not be taken within one-half hour before or after sucralfate.

While healing with sucralfate may occur during the first week or two, treatment should be continued for 4 to 8 weeks unless healing has been demonstrated by x-ray or endoscopic examination.

HOW SUPPLIED
CARAFATE (sucralfate) 1-gm pink tablets are supplied in bottles of 100 and in Unit Dose Identification Paks of 100. The tablets are embossed with MARION/1712. Issued 3/84
